

There Must Be Something Missing

Scientists have invented numerous sophisticated instruments to explore nature, yet most of us have no idea how we acquire our personal values, intelligence, and wisdom.

Thousands of innovators have programed scripts for our supercomputers and applications, yet most parents are not prepared to provide well-rounded, value based educational programs for their children.

Technological developments have advanced, yet many people feel that our civilization's morality and value systems are rapidly deteriorating.

We enjoy an abundance of comfort, convenience, safety, excitement, and material goods in the modern world, yet people feel detached, lonely, empty, depressed, cheated, angry and even hopeless.

Clearly, something is wrong.
We have missed something critical.

Human civilization is at a crossroads.
This book hypothesizes an alternative ideology and a possible future for coming generations.
